

PRINCE OF WALES 50MM SECURITY FENCING

Secure, Reliable and Adaptable Fencing for Any Commercial

The Prince of Wales Security Mesh Fencing provides a durable, adaptable, cost-effective solution for secure bike storage and commercial enclosures. Designed with a 50mm x 50mm welded-wire mesh and fixed to a robust 50mm SHS framework, it delivers tamper-proof installation and long-term reliability. Fully customisable to your project's requirements, the system is available in any standard RAL colour and can be specified with a wide range of gate and locking options. Manufactured in Britain and backed by a 10-year warranty, it's a dependable choice for architects and contractors looking to integrate security, functionality, and clean design. Ideal for internal bike stores, residential enclosures, and commercial developments, the Prince of Wales Mesh Fencing ensures projects meet both security demands and aesthetic standards.

- › **Robust Security:** 50mm x 50mm welded-wire mesh with optional factory welding to SHS framework for tamper-proof installation
- › **Flexible Design:** Available in any RAL powder-coated finish to blend with site aesthetics
- › **Versatile Installation:** Fixed at floor and soffit for stability, adaptable to multiple environment
- › **Access Options:** Single or double-leaf gates with a choice of secure locking systems
- › **Specification Ready:** Designed for quick integration into architectural plans and tender packages
- › **Warranty:** 10-year manufacturing defects warranty
- › **Made in Britain:** Manufactured to the highest UK standards with nationwide installation available

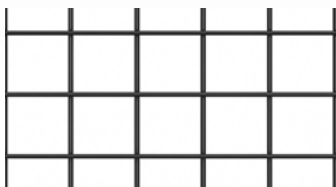

PRINCE OF WALES 50MM SECURITY FENCING

The Prince of Wales Security Mesh Fencing is a reliable and adaptable solution for securing bike storage and commercial enclosures. With a welded-wire mesh design, customisable finishes, and multiple gate options, it's a specification-ready solution for any project. Made in Britain and backed by a 10-year warranty.

Customisation that Works for You

Every site is different which is why this fencing is built to adapt:

- › **Mesh:** 50mm x 50mm welded-wire
- › **Support Framework:** 50mm SHS posts and gate leafs
- › **Finish:** Hot-dipped galvanised, optional powder coat in standard RAL colours
- › **Installation:** Fixed at floor and soffit, factory-weld option for tamper-proof installation
- › **Gate Options:** Single or double leaf, variety of locking systems
- › **Dimensions:** Standard 2500mm H x 2525mm W

Our 50mm x 50mm welded hot-dipped galvanised steel mesh is engineered for strength, durability, and tamper resistance, creating a robust barrier that stands up to daily use in high-traffic environments while ensuring long-term security and peace of mind for end users.

PROJECT

Deanston Wharf, London

Deanston Wharf, designed by Glenn Howells Architects, is a landmark residential development on a prime industrial site along the River Thames. With 769 new homes and 1,125 sqm of mixed-use commercial space, it forms a dynamic community hub as part of the Royal Docks' regeneration strategy. Supporting sustainability and active travel was central to the development, and we were entrusted to provide secure, high-capacity cycle parking solutions to encourage residents and visitors to choose cycling as a primary mode of transport.

Our contribution focused on delivering end-of-trip facilities that are both functional and visually integrated with the development. At the heart of these facilities is the Prince of Wales Security Mesh Fencing, designed for durability, high security, and peace of mind. This premium fencing ensures that residents' bicycles are stored safely while maintaining mesh transparency for easy surveillance and monitoring, helping prevent security threats. The fencing was carefully designed and fabricated to integrate with the building's complete access control system, blending seamlessly into the overall architecture. Complementing the security fencing, we installed two-tier, semi-vertical, and vertical bike racks, providing versatile and space-efficient storage for a variety of user needs. These solutions allow bikes to be locked in multiple secure points and accommodate large numbers of bicycles without compromising on accessibility or convenience.
